

# ShaPix<sup>®</sup> Surface Detective<sup>™</sup>

## Life-Cycle Cost Savings

**Coherix ShaPix<sup>™</sup> digital holographic surface metrology systems save costs from the moment they are installed and throughout their phases of use. Why?**

### Lower Initial Cost and Ongoing costs

The ShaPix Surface Detective costs less to own and use from its initial acquisition and throughout its life, due to its low price, ease of installation, low maintenance and flexibility of use.

### Ease and Economy of Set-up

Other older metrology equipments require weeks and many thousands of dollars for a contractor to program and set up, the ShaPix Surface Detective is set-up in **minutes** for a new part, a part change, or new measurements on the same part. Your own engineers can perform the set-up at **zero cost**. Training for the ShaPix Surface Detective part set-up takes just a few hours during system installation.

### Easy and Immediate Use of Results

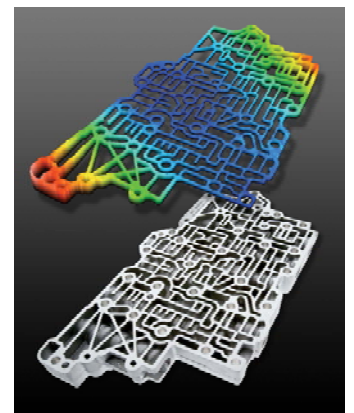

The accurate, detailed, comprehensive 3-D color pictures produced on-line by the ShaPix Surface Detective show part surface dimensional variations in a form **immediately recognized by process engineers and machine operators**. Not just sparse tables of unusable numbers.

### Reliable Operation - Day After Day

With no significant moving parts, ShaPix can be counted on to be operating whenever it is needed. No probes to break, no lubrication or fluids to be dealt with, and no lengthy expensive reprogramming periods when part or the process changes are made.

Let Coherix show you how easy it is to inspect and measure **your part surfaces** to the micron level with ShaPix Surface Detective. Let us show you what ShaPix can tell you about **your part, your product, and your process.**

See how you can significantly improve your precision manufacturing inspection, productivity, costs and quality control. Contact Coherix at one of our locations below or visit us at... [www.coherix.com](http://www.coherix.com)
